Static Files

Static files are served from the ./public directory. You can specify a different location by setting the :public_folder option:

```
set :public_folder, File.dirname(__FILE__) + '/static'
```

Note that the public directory name is not included in the URL. A file ./public/css/style.css is made available as http://example.com/css/style.css.

Use the :static_cache_control setting (see below) to add Cache-Control header info.
